

Website Change Requirements

Required corrections to the marketing site and portals

Field	Detail
Company	ShriNeo Vittiyaam Private Limited
Prepared by	Aryan Srivastava, Founder & CEO
For	Web design and development team
Version / date	v1.0 — 4 August 2026
Status	Active — for implementation
Scope	Marketing website, borrower / agent / lender / admin portals
Confidentiality	Internal confidential

How to use this document

Every item below is written in the same three parts: what to change, why it matters, and how to do it. Where an exact value is given — a colour, a size, a font, a piece of copy — use that value exactly rather than an approximation.

Items are grouped by priority. Priority 1 items should be completed first because they affect every page. Priority 4 items can be picked up alongside other work.

Before you start

A good amount of this build is already right, and those parts should be protected during rework — the Trust Score ring, the portal density differences, the demonstration-data labelling and the Trust Center are all working well. Section 25 lists what not to touch.

Priority 1 — Applies to every page

1. Typography

Three typefaces are currently in use across the site: Inter on roughly 273 elements, Poppins on 49, and Source Serif 4 on the section headings. Only two should be in use.

1.1 The font stack to use

Where	Font	Weights
All headings, body copy, buttons, navigation, labels	Poppins	400 / 500 / 600
Amounts, percentages, APR, EMI, reference IDs, dates, timestamps	IBM Plex Mono	400 / 500 / 600
Hindi and Marathi	Poppins (Devanagari is built in)	400 / 500 / 600
Bengali, Gujarati, Tamil, Telugu, Kannada, Odia	Noto Sans <Script> as fallback	400 / 500 / 600
Remove completely	Inter, Source Serif 4	—

1.2 Why

- **Inter has no Devanagari.** This is the deciding reason. The moment a user switches to Hindi, Inter cannot render the text and the browser substitutes whatever font it finds. Brand control in Hindi is lost entirely. For a platform whose whole positioning is vernacular-first, this is the worst possible place to fail.
- **Poppins was built for exactly this.** It was made by Indian Type Foundry with Devanagari and Latin designed together — 1014 glyphs including the conjunct forms Hindi and Marathi need. The Devanagari character height and the Latin ascender height are set equal, so English and Hindi sit on the same line without the baseline breaking. That situation will occur on almost every screen in this product.
- **IBM Plex Mono is not a style choice.** It has tabular figures, so digits line up in columns, and it clearly separates 0 from O and 1 from l and I. In a product where a user compares ₹9,885 against ₹9,843, that separation prevents real misreadings.
- **Source Serif 4 is not part of the brand.** It appears on four section headings while other headings use Poppins. The result reads as two different brands on one page.

1.3 How

Define these two variables once and use them everywhere. No component should declare a font family directly.

```
--font-ui: 'Poppins', 'Noto Sans Devanagari', 'Noto Sans Bengali',  
          'Noto Sans Gujarati', 'Noto Sans Tamil', 'Noto Sans Telugu',  
          'Noto Sans Kannada', 'Noto Sans Oriya', system-ui, sans-serif;  
--font-num: 'IBM Plex Mono', ui-monospace, monospace;
```

Then search the codebase for every occurrence of Inter and Source Serif 4 and remove them, including from any Tailwind or theme configuration file. Confirm afterwards that no element resolves to either font.

Minimum body size stays at 16px on the marketing site and the borrower and agent portals, and 14px inside the dense lender and admin tables.

2. Remove full stops

What to change	Remove the full stop from the end of headings, sub-headings, eyebrow labels, card titles, button and CTA labels, navigation items, form field labels, badges, table headers, tooltips and any single-line supporting text.
Why	The brand voice reads cleaner and more confident without terminal punctuation on display text. It also removes the visual inconsistency where some titles end with a stop and others do not.
How	Go through every screen in the marketing site and all four portals. Where a heading contains two sentences joined by a full stop, rewrite it as one phrase rather than leaving the internal stop.

Examples:

Currently	Change to
Your Dreams, Our Responsibility.	Your Dreams, Our Responsibility
One process. Five ways forward.	One process, five ways forward
Four steps, start to finish.	Four steps, start to finish
Credit that looks past your bureau history.	Credit that looks past your bureau history
Compare before you choose.	Compare before you choose
Answers before you apply.	Answers before you apply
Check what you qualify for.	Check what you qualify for
Direct bank-to-borrower transfer — ShriNeo never holds your funds.	Direct bank-to-borrower transfer — ShriNeo never holds your funds

One exception

Inside a paragraph that runs to more than one sentence, keep the full stops that separate the sentences — without them the sentences run together and become unreadable. Remove only the final full stop at the end of the paragraph.

Example: "Amount, purpose, and your mobile number. Nothing else to begin" — the first stop stays, the last one goes.

Priority 2 — Header

3. Header background

What to change	Remove the transparency from the header. Two options are given below — build both so we can compare them live and pick one.
Why	The header is currently set to 45% opacity over the hero. Because the hero photograph moves behind it as the page scrolls, the header colour changes continuously as you scroll. That drift is why it looks unfinished. Making the header fully opaque fixes it permanently, because the header stops depending on what sits behind it.
How	Build both options behind a switch so they can be toggled without a rebuild. Everything in section 4 applies to both.

Option A — Light header

A near-solid white bar with navy text. Highest contrast, and the treatment most large banks use over a dark hero. The saffron Apply now button gains contrast on white.

```
header {  
  position: sticky; top: 0; z-index: 40;  
  background: rgba(255, 255, 255, 0.96);  
  backdrop-filter: blur(10px);  
  border-bottom: 1px solid #ECE7DD;  
  box-shadow: none;  
  transition: box-shadow .25s ease-out, height .25s ease-out;  
}  
header.scrolled { box-shadow: 0 4px 18px -8px rgba(0,10,40,.18); }
```

- Navigation text: #002B98
- Logo: the standard navy lockup
- Apply now: #E0912F, hover #C9761A

Option B — Solid dark header

Keeps the dark, immersive feel the site has now, but at full opacity so there is no drift. Smaller visual change from the current build.

```
header {  
  position: sticky; top: 0; z-index: 40;  
  background: #001A5C;  
  backdrop-filter: none;  
  border-bottom: 1px solid rgba(255,255,255,0.14);  
  box-shadow: none;  
  transition: box-shadow .25s ease-out, height .25s ease-out;  
}  
header.scrolled { box-shadow: 0 6px 22px -10px rgba(0,8,60,.55); }
```

- Navigation text: #FFFFFF
- Secondary text: #B9C6E8
- Logo: white lockup
- Apply now: #E0912F, hover #C9761A

Applies to both options

The header must be fully opaque. Do not reintroduce partial transparency in either version — that is the actual defect being fixed.

4. Header logo

What to change	Increase the logo and use the full lockup instead of the square mark.
Why	The logo currently renders at 36 × 36 pixels, which is too small to register as a brand mark and too small to read. It is also showing only the circular symbol rather than the full ShriNeo Capital lockup.
How	Set the height to scale with the viewport and shrink on scroll, matching the header height animation.

```
logo height (page top): clamp(44px, 3.6vw, 54px);  
logo height (scrolled): 38px;  
transition: height .25s ease-out;
```

Width stays automatic so the lockup never distorts. Header height should animate from roughly 86px at the top of the page to 68px once scrolled.

5. Help pill icon

What to change	Replace the icon in the rotating help pill with a question-mark-in-circle icon and apply the container styling below.
Why	The current icon does not read as help at a glance. The pill also needs a defined resting and hover state so it looks like a deliberate control rather than a floating label.
How	Container and icon specification follows.

```
height: 40px; padding: 0 16px;  
background: #E6F1FB;  
border: 1px solid #D6E5F7;  
border-radius: 999px;  
hover: border-color: #0051AE;
```

Icon — 15 × 15, stroke #0051AE, stroke-width 1.4:

```
<svg width="15" height="15" viewBox="0 0 20 20" fill="none">  
  <circle cx="10" cy="10" r="8.2" stroke="#0051AE" stroke-width="1.4"/>  
  <path d="M7.9 7.7a2.2 2.2 0 1 1 2.9 2.1c-.6.2-.9.7-.9 1.3v.4"  
    stroke="#0051AE" stroke-width="1.4" stroke-linecap="round"/>  
  <circle cx="10" cy="14.1" r="0.9" fill="#0051AE"/>  
</svg>
```

Label text #002B98, 14px, weight 600. The label rolls vertically between states with transform .45s cubic-bezier(.4,0,.2,1). A 10 × 10 chevron sits at the right at 55% opacity.

6. Language toggle

What to change	Replace the two-button English / हिन्दी pill with a single dropdown button.
Why	The current segmented pill can only hold two or three languages. The platform is planned for nine — English, Hindi, Marathi, Bengali, Gujarati, Tamil, Telugu, Kannada and Odia — and a segmented control cannot scale to that. A dropdown can, and it keeps the header width stable as languages are added.
How	Button and panel specification follows.

Button:

```
height: 44px; padding: 0 13px;
background: #FFFFFF;
border: 1px solid #ECE7DD;
border-radius: 8px;
font: 500 14px Poppins; color: #002B98;
hover: border-color: #C9D9EE;
```

Button contents, left to right: globe icon (15 × 15, stroke #0051AE) → label → current language code in IBM Plex Mono 11px #5B657D → chevron.

Dropdown panel:

```
width: 176px; padding: 6px;
background: #FFFFFF;
border: 1px solid #ECE7DD;
border-radius: 10px;
box-shadow: 0 18px 40px -20px rgba(0,43,152,.28);
```

Each row shows the language name in its own script on the left and the code in IBM Plex Mono on the right, with hover fill #E6F1FB.

One detail worth getting right

When English is active, the switch label should appear in the alternate script. When Hindi is active, it should read "Choose language". This makes the control findable for a user who cannot read the language currently on screen — which is the whole point of having it.

Priority 2 — Hero section

7. Ask Neo link

What to change	Remove the arrow to the right of Ask Neo and replace it with an underline. Keep the microphone icon on the left.
Why	Apply for a loan and Ask Neo currently both end in an arrow, so both read as equal-weight buttons. There should be one filled primary action and one text-link secondary action, so the eye knows which one to take first.
How	Styling follows.

```
display: inline-flex; align-items: center; gap: 9px;
min-height: 44px; padding-bottom: 4px;
border-bottom: 1px solid rgba(255,255,255,0.45);
color: #FFFFFF; font: 500 16.5px Poppins;
letter-spacing: -0.01em;
hover: border-bottom-color: #FFFFFF;
```

Leading microphone icon: 16 × 18, stroke #FFFFFF, stroke-width 1.4.

8. Hero sub-headline colour

What to change	Change the two lines under the headline from #FFFFFF to #B9C6E8.
Why	The headline is pure white. When the sub-headline is also pure white, the two sit at the same visual level and the eye has no order to follow. #B9C6E8 sits one step below white, which creates the hierarchy without adding weight. Contrast against the navy background stays comfortably above accessibility minimums.
How	Applies to both lines: "Built for customers. Designed for agents." and "Supported by banks. Powered by trust."

Priority 2 — Sliding strip and How it works

9. Sliding strip below the hero

Two changes here. The continuous left-to-right movement stays as it is — that is intentional.

9.1 Pause on hover

What to change	The strip keeps scrolling continuously as it does now. When the cursor enters the strip, the movement stops. The item the cursor is over shows its hover state. When the cursor leaves, movement resumes from where it stopped.
Why	Right now a user who sees something they want to read cannot stop to read it — they have to wait for the loop to come around again. Pause on hover keeps the motion for everyone who is just passing by, and gives control to anyone who actually wants to read an item.
How	Implementation follows.

This is straightforward with a CSS animation rather than a JavaScript scroll loop:

```
.strip-track {
  display: flex;
  animation: marquee 40s linear infinite;
}
.strip:hover .strip-track,
.strip:focus-within .strip-track {
  animation-play-state: paused;
}
@keyframes marquee {
  from { transform: translateX(0); }
  to   { transform: translateX(-50%); }
}
```

- Duplicate the full set of items once inside the track and animate to -50%, so the loop is seamless with no visible jump
- animation-play-state resumes from the exact position it paused at, so nothing snaps when the cursor leaves
- Each item gets its own normal hover state — background lift, or icon tile darkening to #D6E5F7 — which will now be visible because the strip has stopped
- Add :focus-within alongside the hover rule so keyboard users get the same pause, and stop the animation entirely under prefers-reduced-motion — both are one line each and prevent accessibility problems later

9.2 Icons

What to change	Replace the icons in the strip with the platform capability icons, and apply the tile treatment below.
Why	Copying only the glyphs will not be enough — the tile is what makes a set of icons read as one system rather than a row of unrelated symbols.
How	Each icon sits inside a tile, and the tile sits inside a card.

```
/* icon tile */
width: 40px; height: 40px;
border-radius: 10px;
background: #E6F1FB;
```

```
/* card holding the tile */
background: #FFFFFF;
border: 1px solid #E3EAF6;
border-radius: 14px;
padding: 26px 24px;
```

Card title 17px weight 600 in #002B98. Card body 14.5px in #5B657D. Icon stroke uses the navy and mid-blue tokens.

10. How it works — the line above the four steps

What to change	Turn the static line above the four numbered steps into a progress line that draws across as the section scrolls into view.
Why	It is currently a plain 1px rule, which reads as a divider separating the steps rather than a path connecting them. Drawing it makes the four steps read as one journey, which is the point of the section.
How	One-time draw only, triggered when the section enters the viewport. It must not loop or replay on every scroll past, and it must not animate at all when the user has reduced motion enabled.

Priority 2 — Comparison card

11. Simplify the card and change the lender names

11.1 Reduce the columns

What to change	Reduce the card face from six numeric columns to three: Lender, APR and EMI. Move rate, fee and total repayment into the offer detail view.
Why	The card is currently carrying lender-portal density on a marketing page. Six numbers side by side is more than a visitor will read, and the volume of figures hides the one argument the section is making.
How	New card face below.

Lender	APR	EMI
IDFC First Bank	12.4%	₹9,885
Bajaj Finserv	12.9%	₹9,843
Bank of India	13.1%	₹10,061

- Keep the amount and tenure line at the top: ₹3,00,000 over 36 months
- Keep the "Ranked by total cost" label
- Keep the one-line rationale under each lender name — "Lowest total cost for your profile", "Lower headline rate, higher fee", "Fastest indicative decision"
- Keep the closing line: "Offers are not ranked by commercial arrangement. Final terms are set by the participating lender"

Why the rationale lines matter more now

With total repayment removed from the card face, the second lender shows a lower EMI than the first while still costing more overall. That is exactly the point the section is making — the lowest monthly figure is not the cheapest loan. The one-line rationale under each lender is now the only thing explaining that, so it cannot be dropped.

11.2 Lender names

What to change	Replace Aarambh Finance, Meridian Bank and Setu Capital NBFC with IDFC First Bank, Bajaj Finserv and Bank of India.
Why	Recognisable institution names make the comparison land immediately with a visitor, in a way invented names cannot.
How	Two labels must go on the card at the same time as the names — both are required, not optional.

1. Demonstration data strip

The existing label is a faint caption in the top-right corner. Replace it with a full-width strip across the top of the card so it cannot be missed:

```
background: #FBEEDA;  
color: #C9761A;  
font: 600 11px 'IBM Plex Mono';  
text-transform: uppercase; letter-spacing: 0.12em;  
text: DEMONSTRATION DATA
```

2. Disclaimer directly below the card

Always visible. Not inside a tooltip, not behind a "read more", not collapsed:

Lender names shown are illustrative of the institutions ShriNeo is built to integrate with. All trademarks are the property of their respective owners. No partnership, endorsement or affiliation is implied

Style: 12px, #5B657D, sitting just under the card, below the bottom border.

Priority 2 — Agent portal

12. Recovery adjustment tile

The agent dashboard currently shows a fourth KPI tile reading:

CLAWBACK ADJUSTMENT • ₹0 *First-payment default recovery*

What to change	Rename the tile, change its subtitle, and rebuild how recovery entries are displayed in the commissions ledger.
Why	The subtitle states that if a borrower misses their first EMI, money is recovered from the agent. That is not our policy. Recovery is raised only where there is a matching lender fee reversal, proven misrepresentation by the agent, or a documented policy breach. A borrower missing a payment is not the agent debt.
How	Changes listed below.

Why this matters commercially, not just legally

Agents are the acquisition channel and the pitch to them is zero cost, no security deposit. A dashboard that says their earnings can be taken back because a borrower missed a payment asks them to carry a credit risk they have no control over. That is the single strongest reason a good agent would decline to join. It also does not match the agreement they will be signing, which creates a dispute we would lose.

12.1 Dashboard tile

Element	Currently	Change to
Title	CLAWBACK ADJUSTMENT	RECOVERY ADJUSTMENT
Subtitle	First-payment default recovery	Case-linked only • appealable
Info icon	None	Add, with the tooltip below

Tooltip text:

Recovery is raised only against a matching lender fee reversal, proven misrepresentation, or a documented policy breach. A borrower missed payment alone does not create a recovery

12.2 Commissions and ledger pages

Every recovery entry must display all five of the following. If any one of them is missing, the entry should not be shown as a recovery.

1. Case reference — for example CASE-2026-0412
2. Reason — which of the three triggers applied
3. Cap — never more than the commission actually paid on that specific case
4. Notice date and the response window given to the agent

5. Appeal button, with the current appeal status visible

12.3 Status flow

Recovery cases move through these states, and the chip on screen must reflect the current one:

Notice Issued → Agent Responding → Under Review →
Upheld / Partially Upheld / Withdrawn → Appealed → Appeal Decided

One hard rule

The agent wallet balance must never display a negative number. If there is no recovery, it shows ₹0. There is no state in which an agent sees a minus figure on their balance.

Priority 3 — Navigation, routes and footer

13. Header navigation

What to change	Add For Borrowers and For Lenders to the primary navigation.
Why	The header currently shows Loans, For Agents, About and Trust Center. Both missing pages already exist and are fully built — they are simply not linked from the header. A borrower has no direct route to the borrower page, and a bank or NBFC evaluating us has no route to the lender page at all. Since lenders are the revenue side of the business, that second one is a commercial cost, not just a navigation gap.
How	Link the existing pages. No new pages need to be built.

Final navigation order: Loans · For Borrowers · For Agents · For Lenders · Trust Center · About

14. Footer links pointing to the wrong pages

What to change	Fix three footer links that currently land somewhere other than where their label says.
Why	A visitor clicking Blog lands on the Help Center and concludes the site is broken. Mislabelled links do more damage to credibility than a missing link does.
How	Either build the destination page, or change the label to match where the link actually goes. Do not leave the mismatch.

Label	Should go to	Currently goes to
Blog	/blog	/help-center
Press	/press	/about
Partners	Partner enquiry page	/for-lenders

15. Missing pages

Twenty-one pages exist. The following are missing and need to be built. They are listed in the order they should be picked up.

15.1 Build first

Page	What goes on it
Digital Lending Disclosures	Legal entity, business role, lender relationships, product ownership, customer care and grievance officer contacts, privacy policy link, data categories collected, third-party providers used, who owns recovery, and the RBI complaint portal links. This is the page a regulator or a partner bank looks for first, and we do not have it at all

Page	What goes on it
SNV Trust Score explainer	What the score is, the 0–100 scale, how it differs from CIBIL, which consented data categories feed it, what data sufficiency means, and that the lender makes the final decision. We market the score on the homepage but a visitor has nowhere to go to understand it. Do not publish weights, thresholds or model rules
Security	Encryption, India-region hosting, role-based access, how documents are accessed, audit logging, incident communication, and a route to report a vulnerability. Do not use the phrase "100% secure" anywhere on it
Privacy and Data	Separate from the privacy policy. Itemised purposes, data categories, who receives what, retention periods, and how a user withdraws consent or requests access, correction or erasure

15.2 Build next

- Products overview — all five products on one page with ranges and a comparison
- Blog — listing page plus article pages
- Careers — currently only an email link, needs a real page
- Press — media contact, boilerplate and brand assets
- Partner Enquiry — lender and enterprise intake form
- FAQ — as a standalone page, not only the homepage block
- Accessibility statement
- System Status

16. Footer structure

What to change	Add the two missing footer columns and complete the two existing ones.
Why	The footer is the fallback route to everything on the site. Several pages that exist today cannot be reached from it, and the trust and legal column is missing most of what belongs there.
How	Final footer structure below.

Column	Contents
Products	Personal Loan · Business Loan · Home Loan · Mortgage Loan · Sachet Loan
Solutions (add)	For Borrowers · For Agents · For Lenders
Company	About (missing today) · Careers · Contact · Press · Blog · Partner with us
Trust & Legal	Trust Center · SNV Trust Score · Security · Privacy and Data · Digital Lending Disclosures · Accessibility · Privacy Policy · Terms & Conditions · Cookie Policy · Grievance Redressal
Help (add)	FAQ · Help Center · System Status · Track a complaint

16.1 Add the fund-flow line to the footer

What to change	Add this line to the footer legal block: "Loan funds move directly between the regulated lender and your bank account. ShriNeo does not hold or control loan funds"
Why	The line currently appears in the hero only. The footer is where anyone checking how we are structured will look, and it is the one statement that explains our position most clearly.
How	Place it in the legal block alongside the entity line, above the copyright row.

Priority 3 — Homepage sections

17. Add an assistance choice block

What to change	Add a block explaining that a borrower can either apply on their own or get help from a verified agent. This does not need its own section — fold it into an existing one, most naturally the How it works section or the block just after it.
Why	Right now the site presents self-service as the only path. A large part of our target user will not complete an application alone, and the agent network is the reason they will not have to. If a visitor cannot see that choice, they leave. It also needs to be clear that the borrower stays in control.
How	The block needs to cover three things, briefly.

6. The borrower chooses — apply directly, or ask for a verified agent
7. Contact between borrower and agent is masked, so the agent never sees raw personal contact details
8. The borrower keeps control — the agent cannot select an offer, accept an offer, or sign on the borrower behalf, and the borrower pays no agent fee

18. Lender value — put it in the footer

What to change	Add a "Partner with us" item to the footer Company column, linking through to the lender page. No lender section is needed on the homepage.
Why	Lenders are not the homepage audience — borrowers are, and agents second. A lender band on the homepage would dilute a page that already has a lot to do. But a bank or NBFC evaluating us needs a visible route, and the footer is where a business visitor looks.
How	Label it Partner with us in the Company column. Combined with For Lenders in the header navigation, that gives two clear routes without taking homepage space from borrowers.

19. Trust Center preview — no change needed

The Trust Center is already reachable from both the header and the footer. No preview block is required on the homepage. Leave this as it is.

20. Language section — remove

What to change	Remove the language row from the homepage entirely.
Why	The language switch lives in the header, where it is visible on every page. A second language block on the homepage repeats a control the user already has and takes up space between two sections that should sit next to each other.
How	Delete the section. Close the gap so the sections above and below meet cleanly, and check that the section background alternation above and below still reads correctly once it is gone.

Priority 3 — Sign-up

21. Replace the role selector with a single checkbox

What to change	Remove the "I am joining as — A borrower / An agent" radio buttons. Replace with one checkbox reading "Are you a loan agent?", unchecked by default.
Why	The radio buttons force every visitor to classify themselves before they have done anything, and the large majority are borrowers. A single unchecked box lets the common case proceed without a decision, and lets the smaller group identify themselves in one tap.
How	Form and routing below.

21.1 Form fields, in order

9. Full name
10. Mobile number, with +91 prefix
11. Checkbox — "Are you a loan agent?" — unchecked by default
12. Checkbox — Terms and Conditions and Privacy Policy acceptance
13. Button — Send one-time password

21.2 Routing after OTP verification

Agent checkbox	Where the user lands
Ticked	Agent panel
Not ticked	Borrower panel

21.3 Two details to get right

- Keep the two checkboxes separate. The agent question and the terms acceptance must never be combined into one box
- When the agent box is ticked, show a short helper line below it: "You will be asked to complete KYC and agent verification after sign-up" — so the user knows more steps are coming and does not abandon later

Priority 4 — Remaining items

22. Sachet Loan is labelled as unavailable

What to change	Remove "Coming in Phase 2" from the products grid and "Planned for Phase 2 — this product is not operational yet" from the Sachet Loan page. Build Sachet as a complete journey like the other four products.
Why	A disabled card on a prototype tells a partner or investor that a fifth of the product does not exist. Where the journey uses illustrative data, say so with a demonstration label — the same way the borrower and agent portals already do it. That is honest and it still shows the full platform.
How	Give Sachet the same page structure as the other four products, with a demonstration-data label wherever figures appear.

23. Accessibility

Item	What to do
Image alt text	Three of the six images on the homepage have no alt text. Add a short description to each. Decorative images take an empty alt attribute rather than being left off
Language attribute	The page language attribute stays "en" even when Hindi is selected. Set it to "hi" on switch, otherwise screen readers read Devanagari using English pronunciation
Rotating header pill	The help pill label changes on a timer with no user control. Pause it on hover and on keyboard focus, the same way as the sliding strip
Tap targets	Keep every interactive element at a minimum of 44 × 44 pixels. Most already are — check the footer links and the language rows

24. Placeholder text before launch

Two placeholders are visible in the footer: "CIN: To be configured" and "To be configured" next to the grievance officer contact. These are fine while we are in prototype, but both must carry real values before the site goes public. Track them as launch blockers rather than design items.

25. What is working — do not change these

These are already correct and should be protected while the rest of the work is done. If something in this list breaks during rework, treat it as a regression.

- **SNV Trust Score section.** The 0–100 closed ring, the band colours, the indicator position, the "Illustrative example" label and the wording that the score does not approve or reject — all correct. Do not change the ring to a semicircle or gauge, and do not display the score on a 300–900 scale anywhere
- **Direct fund-flow wording.** Clear and correctly placed throughout
- **Demonstration labelling.** "Demonstration data — no live lender information is shown", "Illustrative conversation", "demonstration environment" — this is applied consistently and is doing exactly the right job
- **Trust Center.** The three-way split of responsibility between ShriNeo, the lender and the borrower is clearer than most established players manage
- **Portal density.** Borrower light, agent medium, lender dense, admin densest — deliberately different and correct for each role
- **Lender portal decision handling.** Applications route to manual review rather than being auto-rejected. Keep it that way
- **Agent commission wording.** "Eligible after lender-confirmed disbursal" is exactly right
- **404 page.** Well built, reassures the user their account is untouched, and carries the correct entity line
- **Cookie banner.** Analytics off by default with a real reject option
- **Hero, Trust Score and Agent section gradients.** Colour values are correct. No changes needed
- **Footer.** Colour and gradient stay exactly as they are. Only the logo inside it changes

26. Implementation checklist

Work down in this order. Items in the same priority can run in parallel.

#	Item	Section
1	Replace Inter and Source Serif 4 with Poppins and IBM Plex Mono	1
2	Remove full stops from display and UI text	2
3	Build both header options behind a switch	3
4	Header logo size and full lockup	4
5	Help pill icon and container	5
6	Language toggle as a dropdown	6
7	Ask Neo underline, remove arrow	7
8	Hero sub-headline to #B9C6E8	8
9	Sliding strip — pause on hover, new icon tiles	9
10	How it works progress line	10
11	Comparison card — three columns, new names, both labels	11
12	Agent recovery tile and ledger entries	12
13	Add For Borrowers and For Lenders to navigation	13
14	Fix three misrouted footer links	14
15	Build the four priority pages	15.1
16	Complete footer columns and add fund-flow line	16
17	Add assistance choice block	17
18	Add Partner with us to footer	18
19	Remove the homepage language section	20
20	Sign-up single checkbox and routing	21
21	Remove Sachet Phase 2 labelling	22
22	Accessibility fixes	23
23	Build the remaining pages	15.2

Appendix A — Neutral background colour, for future reference

This is not a change request

Nothing on the marketing site or homepage changes because of this appendix. The current backgrounds stay exactly as they are. This is recorded here only so that the value is fixed and consistent when new screens are built later.

Where a surface needs to sit slightly off plain white — new portal screens, new pages, card backgrounds behind content — use Bone rather than a cream or ivory tone.

Token	Value	Use
Bone	#F6F5F3	Section and surface backgrounds that should read as off-white
Blue tint	#EEF3FB	Alternating section background, already in use
White	#FFFFFF	Cards and panels sitting on either of the above

Why Bone and not ivory:

- Ivory tones carry a visible cream cast that reads as printed stationery on screen, and it dates quickly against a saturated navy
- Bone keeps the warmth that stops a page feeling clinical, but without the yellow
- The saffron button and navy text both sit correctly on it, with no shift in contrast
